

Information Capsule

- A project extension request to December 2024 is in progress. If you need to be a part of this extension reach out for further information on the process and documentation needed.
- We want to stay closer! If you haven't done so, please fill out this form to confirm your interest in participating in virtual information exchange sessions. <https://tinyurl.com/3a7hf8un>
- The GEF CRew+ Champions campaign was released last September 15th. Check out our first article from Mabel in Cuba. <https://tinyurl.com/r74ztck6>

In Trinidad and Tobago, GEF CRew+ is working on the implementation of a water reuse pilot utilizing treated wastewater from the Trincity WWTP for irrigation in agriculture to achieve an efficient use of water.

In Jamaica, GEF CRew+ is proposing the implementation of an innovative project. The "Integrated Management and Wastewater Reuse" project will entail the use of the "treated effluent" from the Innswood WwTP in St. Catherine wherein it will undergo further treatment via artificial infiltration at MARS, thereby, to assist with the recharging of the Lower Rio Cobre Hydrological Aquifer Basin. A true example of circular economy!

*MARS: Managed Artificial Recharged System.
